

Abstract

A light diffusing device comprising a light source with an emission section, a translucent suction cup with a first side and a second side, the first side attached to the lamp emission section and a diffusion element attached to the second side of the translucent suction cup, the diffusion element radiating the lamp light out in a plurality of directions. A diffuser for diffusing a radiation source, the diffuser comprising a translucent body with a suction cup attachment end and a diffuser end, the suction cup end positioning the diffuser in a path of radiation source radiation and the diffuser end diffusing the radiation source radiation that travels through the translucent body into a plurality of directions.
